ABOUT US

Any pump. Anywhere.

WHAT WE DO

deckpro pumps is a specialist pump engineering company offering supply, installation, repair and maintenance services for any pump, anywhere.

www.deckpro.uk.com

OUR MISSION

Our mission is to excel in customer service, by combining technical excellence and risk management. By providing high quality, reliable goods and services, and by creating an environment of interest and care, we empower our clients to fulfil their own missions, and our 24/7 phone line means we're always on hand to help.

“

DECKPRO PUMPS' SERVICE IS SECOND TO NONE. THEIR KNOWLEDGE AND EXPERTISE IN THIS FIELD IS EXEMPLARY AND I WOULD NOT HESITATE IN RECOMMENDING THEM TO ANY ONE REQUIRING A NEW PUMP IN THEIR FACILITY.

ZOE, POOL MANAGER

PRODUCTS & APPLICATIONS

TYPES OF PUMP

- Horizontal multistage pumps
- Vertical multistage pumps
- End suction centrifugal pumps
- In-line pumps
- Submersible pumps
- Lobe pumps
- Diaphragm pumps
- Progressive cavity pumps
- Blowers

APPLICATIONS

- Swimming pools
- Heating and boiler systems
- Sewage
- Storm water
- Boosted water
- Industrial processes
- Chiller systems
- Irrigation

SUPPLY & INSTALLATION

SUPPLY

We partner with a range of pump manufacturers to ensure the best selection of equipment for you. We recognise that the pump itself is just one aspect to consider.

Depending on your specific site or project requirements, we consider: suitability of the pump, life expectancy compared to requirements of the site, availability, and price.

Experience peace of mind with quick turnaround times and a proactive, solution-orientated approach. Your pump will be delivered precisely when you need it - at a great value price.

If unsure, we'll find the best option for you. One that is powerful enough to do the job, but small enough to maximise efficiency.

INSTALLATION

Our highly proficient and expertly trained installation teams will ensure your pump will last longer, be more efficient and maximise cost-savings.

In line with our mission to provide fast and effective services, all installations are carefully pre-planned, keeping you informed at every step of the way.

We understand that pumps are not always predictable or convenient. That's why our solutions include out of hours of working, confined space working and working in high security areas. Our installation expertise includes: mechanical, electrical, instrumentation, controls and automation.

REPAIR & MAINTAIN

REPAIR

We understand that when you need a repair, you need a fast, first time fix. This may include replacing or modifying a part and re-installing the pump. But often, repairs are not always this simple. If the pump can't be removed or the part isn't easily available, it needs some thinking outside the box. That's where our experience and technical knowledge kick in!

Our unique and free of charge tagging service gives us the ability to provide the fastest and most accurate responses to any pump breakdown. A pump can be a small but very critical part of a larger operation, so time becomes a very expensive commodity. Maximising efficiency is key to the way our emergency pump repair response is geared.

MAINTAIN

Over the lifetime of a pump, twice as much is spent on maintenance and repair as on the initial purchase. Effective preventive maintenance can not only make cost savings, but it will also save considerable time and hassle.

What would happen if a critical pump stopped working one day without warning?

We'll help you evaluate the benefits and necessity of a planned maintenance contract for each of your pumps. Sometimes, it may be more efficient to wait for a pump to fail, but the best approach depends on various factors.

Our expertise will guide you in making the most cost-effective and efficient decision.

“

DECKPRO PUMPS' PRODUCTS
AND LEVEL OF SERVICE FAR
EXCEED OTHERS I HAVE
USED.

PAUL, CLUSTER TECHNICAL MANAGER

OUR PROJECTS

WHO WE WORK WITH

We work across a range of sectors including:

- Facilities management teams
- Industrial engineers (particularly at food manufacturing sites)
- Leisure groups
- Mechanical & electrical contractors
- Drainage engineers
- Hospitality groups (such as hotels, restaurants and pubs)
- Hospitals and healthcare trusts
- Local councils
- Universities, colleges and schools
- Parks and public attractions

OUR CLIENTS

“

DECKPRO PUMPS HAVE BEEN
A VALUABLE ADDITION TO
OUR PREFERRED
CONTRACTORS LIST,
SURVEYS ARE CARRIED OUT
VERY QUICKLY AND WORKS
COMPLETED TO A HIGH
STANDARD. EXCELLENT
SERVICE. WE HIGHLY
RECOMMEND DECKPRO!

|

MICK, TECHNICAL MANAGER

CASE STUDY

HOLIDAY INN, BRIGHTON

deckpro pumps was commissioned by our client at RPM Installations to upgrade the pump system, installing a new 2250-litre cold water storage tank and a three-phase variable speed booster set.

THE CHALLENGE

The client needed to upgrade their system without disrupting hotel guests or residents. Despite spatial constraints, our engineers successfully installed the new pump by removing bricks from a restricting wall, ensuring seamless integration and adherence to the schedule.

www.deckpro.uk.com

THE SOLUTION

Our engineers completed the entire project during normal working hours (including the change over of the water supply) with no disruption to the hotel's operations. Our client was delighted with the "smooth implementation" of the project, which has resulted in improved efficiency and reliability of the pump system.

“

WE WOULD HIGHLY
RECOMMEND DECKPRO
PUMPS FOR THEIR EXPERTISE
AND QUICK TURNAROUND.
THEIR GUY ON THE GROUND
IS ALWAYS WILLING TO
ATTEND SITE AND FIRST TIME
FIX IF POSSIBLE. LONG MAY
OUR ASSOCIATION
CONTINUE. 5/5 STARS.

PETER, TECHNICAL SUPERVISOR

CASE STUDY

ROBINSON POOL, BEDFORDSHIRE

Our client commissioned us to replace three outdated pumps and upgrade pipework with pre-fabricated, custom-made components.

THE CHALLENGE

The existing 40-year-old Worthington Simpson pumps (using inefficient 9.3kW motors and non-DIN cast-iron pipework) were leaking and clogged with scale, affecting efficiency and water quality. As the pool operated 16 hours a day, 7 days a week, it was vital to keep the pool fully operational during the upgrade.

THE SOLUTION

We specified inverter-driven pumps with a custom control panel to automatically adjust speed based on demand. The pre-fabricated pipework allowed for overnight installation, keeping the pool fully operational during normal hours. The new system uses **82% less energy** and has improved water quality, with no inconvenience caused to customers or staff.

“

THE STAFF HAVE A CAN DO
ATTITUDE AND WILL LOOK
FOR A SOLUTION WHEN
FACED WITH DIFFICULTIES TO
ENSURE THE JOB GETS
COMPLETED.

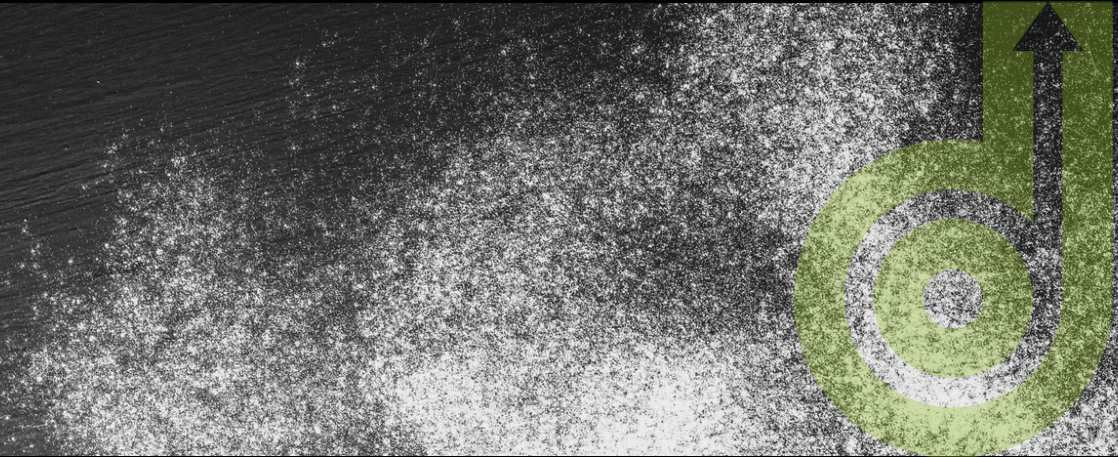

|

NIK, HGV SUPERVISOR

CASE STUDY

FLOUR MILL, TRING

We transitioned our client's pumps from obsolescence to compliance, as quickly as possible to minimise operational disruption. Replacing a diesel-powered fire pump with a modern, LPCB-approved alternative.

THE CHALLENGE

The existing diesel-powered fire pump had reached the end of its serviceable life and had been condemned, invalidating the property's insurance. We specified an SPP-built fire pump, again diesel-powered, which could be installed in the same location and met all relevant requirements and certification.

THE SOLUTION

The new pump was installed on time and to plan, allowing the site to continue normal operations without interruption. Ongoing servicing (by deckpro pumps) ensured the new system was kept in good condition, extending its working life and mitigating future risk of failure.

“

DECKPRO PUMPS ARE
STRAIGHTFORWARD AND
HONEST. WE WOULD HIGHLY
RECOMMEND THEM TO ANY
THAT REQUIRE THEIR
SERVICES.

KIRSTY, BUSINESS DEVELOPMENT EXECUTIVE

CASE STUDY

UNIVERSITY BUILDING, LONDON

We refurbished four failing 55kw pumps, which were used for circulating heated and cooled water around the entire University.

THE CHALLENGE

The failing pumps had been in constant use and eventually began to leak. They'd reached a point where they were hardly usable and the site team needed a solution fast. It was imperative that the refurbishment was completed without any disruption to the students and building occupants.

THE SOLUTION

We quickly attended site and found that the pumps required a full overhaul. Within two days, we sourced the necessary parts and all four pumps were refurbished (with new wearing parts) within a week. The client was delighted with the outcome; the pumps are now working efficiently and the University was able to stay open.

WHY DECKPRO?

01

COST SAVINGS

Our focus on cost reduction means savings for you in the short, medium and long term, both on the work completed and on the running and maintenance.

03

PROACTIVE

Part of our mission is to solve any pump-related challenge 'within the shortest possible timeframe'. A 24/7 phone line and fast turnaround minimises downtime and inconvenience to you.

02

RISK AVERSION

We offer fixed-price quotations for all our work. If complications arise, we'll sort them at no extra cost to you. If your pump is beyond repair, we'll discuss options with you before proceeding, ensuring no unexpected costs. That means easy budgeting and cost control.

04

CONVENIENCE

We work with any pump, anywhere. With years of experience in the industry, we can take the effort out of the supply, installation, maintenance and repair of your pumps and pump systems.

05

GUARANTEES

Clients love us for being consistent and for doing what we say we're going to do. All of our work comes with a 12 month warranty, for your peace of mind. So if there are any issues further down the line, we'll come back as many times as required (free of charge) to fix it.
